Hello Julie,

The email below from John Ruch came to the Environmental Information Service Center (EISC) group email box. To try to understand the comment, I googled CFAC REPORTS and found the following website.

<http://www.missoulacfac.org/reports.html>

Since you work with water in MT, are you the appropriate contact for this email?

Thanks,  
Rose Brogden

Submitted values are:

Your Name: John Ruch  
Email Address: [jrrr@centurytel.net](mailto:jrrr@centurytel.net)  
Comments: There is no mention of checking for mercury contamination in CFAC

reports. Mercury rectifiers used to be used and rebuilt at the plant and flowmeters were steam cleaned in the paint booth. Cooling ponds down at the river should be checked for mercury. Furthermore the location is unknown of mercury from flowmeters containing approximately 20 GALLONS of mercury that were scrapped with the old cooling towers.
